

## **BIO TOUCH MACHINE KIT OPTION 1** valued over \$1,000

**Features :one year warranty on machine** The latest in the Bio-Touch range of Cosmetic Tattoo Machines accommodates both Round & Flat needles and has a rotary motor. This is the most powerful of all rotary machines on the market and it rotates up and down not side to side making for a quicker procedure every time and less trauma to the skin. Insertions 30-130rpms (speed).

**This machine has 4 disposable parts which must be changed for every client.**

All parts are fully disposable right down to the motor – thus stopping cross contamination

**Needles:** Precision engineered needles are available from single prong through to seven prong round needles and three, four & six prong flat needles.

**Caps:** Mosaic Machine Caps allow for pigment to be inserted into the cap thus cutting out the need to dip into pigment holders!

A regulated airflow allows for the correct amount of colour to be used for every treatment. Not enough air causes a “vacuum effect” and sucks up pigment; too much air can force pigment down too hard and splatter this stops pigment being taken into the skin. Less pigment in the skin will cause the colour to fade.

**Sleeves:**

The needle sleeve protects the needle and is ergonomically shaped to reduce slippage and provide comfort for the hand.

A metal sleeve can be autoclaved (sterilised) or is available in disposable pre packaged containers of 20 per pack.
